

Sumdoku

Hitoshii

These puzzles are a development of Sumdokus where the totals given in each of the areas bounded by pink lines (also called cages) can be the result of not only addition sums but also, multiplication, subtraction and division. For example, the two-square cage totalling '20x' could only contain 5 times 4, or 4 times 5. As with a standard su-doku the numbers 1-6 can only appear once in each row and column.

4+	3÷	30x	11+		
				1-	10+
30x		6+			
2x		3	150x		
72x			3÷		
20x		2		5-
